More versatile, more possibilities

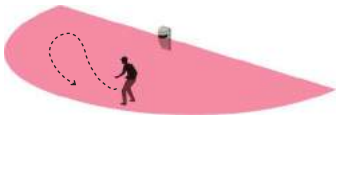
LASER SCAN DETECTOR
RLS-3060SH

With its new features, the REDSCAN, RLS-3060SH, provides a huge choice of detection and adjustment parameters to meet the requirements of a wide range of security and safety applications.

New features

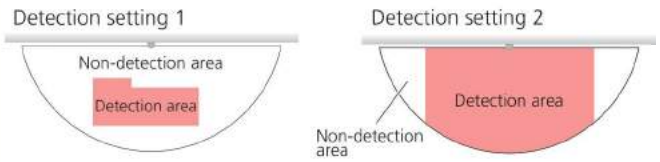
Loitering detection

The REDSCAN will pick up suspicious loitering behavior, by monitoring if a person is staying longer than the preset time in the detection area.



Switchable detection areas

Users can define different detection settings for selected areas and apply different rules using the area masking /allocating functions. It allows the user to make some detection areas active during the day and others during the night using software provided by OPTEX.

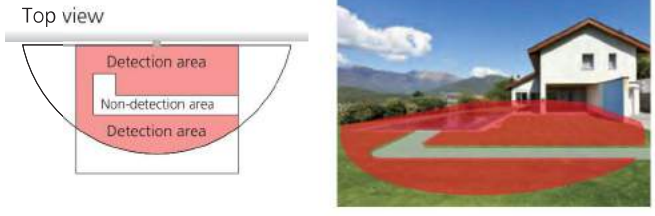


Fence/wall top protection

The REDSCAN will detect intruders climbing over a fence or a wall by creating a detection area above it.

Area masking

Users can define non-detection areas using the new REDSCAN area masking feature.



Area allocating

The new area allocation functionality enable users to create a number of independent detection areas.
