ELECTRONIC  
SOLUTIONS

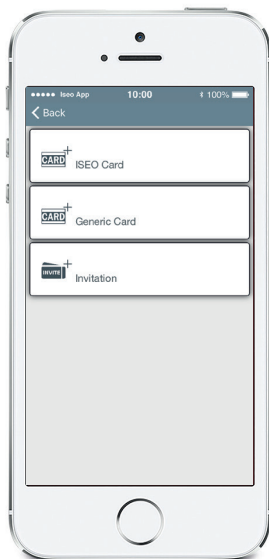

# ISEO ARGO Invitations

Invitations allow phones self registration as users in the doorlock. With the invitation function you can allow users to add their smartphone using an invitation code you provide without having the need to be with their smartphone at the door.

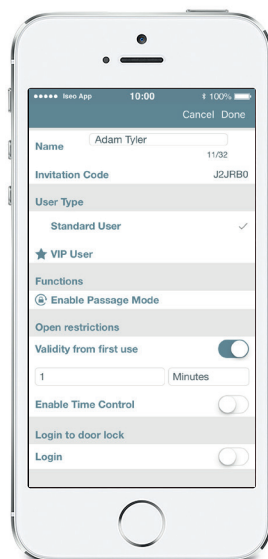

First an invitation code should be programmed in the door lock as one of the 300 users. Arriving in front of the door, the user will select the door, type the invitation code and open the door with the smartphone.

At the same time the phone will be self registering in the user list for the period specified in the invitation. The invitation code can be used only once. The invitation code which is already consumed cannot be reused.

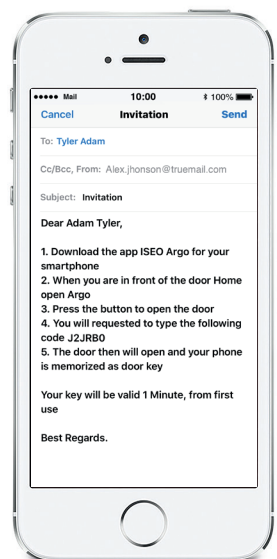

**ADD INVITATION**

The administrator selects "add user" and add the invitation code in the users list at the door.

**FILL IN INVITATION  
PARAMETERS**

The administrator programs the invitation parameters as any user. In addition to Validity range and time schedule it is possible to specify the validity in minutes or hours or days from the first use of the invitation.

**SEND INVITATION**

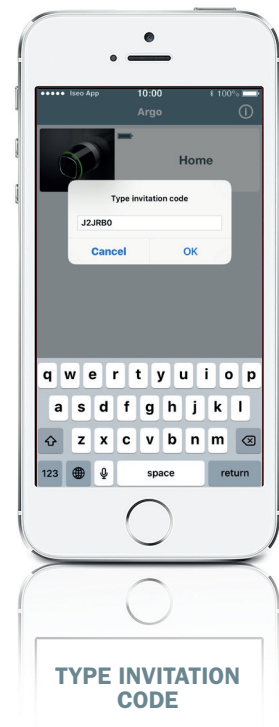

The administrator sends by email the invitation code to the user which is not registered yet in the door.

The user receives the invitation code on the phone.

The user opens the Argo App, presses the door opening button and the invitation code will be requested.

Typing the valid invitation code (pre-registered) the door opens and registers the phone in the user list. The invitation code is consumed and cannot be reused.
